

Robot Framework — Task 1

1. Experiment Title

Verification of Web Element Presence Using Robot Framework

2. Problem Statement

Write a Robot Framework test case to verify the presence of a specific element on a webpage using the **Page Should Contain Element** keyword.

3. Objective

To verify the presence of a specific web element on a webpage using **Robot Framework** and **SeleniumLibrary**.

4. Tools, Software and Concepts Used

Tools / Software

- Python
- Robot Framework
- SeleniumLibrary
- Google Chrome
- Visual Studio Code

Concepts

- Robot Framework test cases
- Selenium WebDriver
- SeleniumLibrary
- Variables
- Open Browser
- Page Should Contain Element
- Log
- Close Browser

5. Source Code / Implementation

File: element_test.robot

*** Settings ***

Library SeleniumLibrary

*** Variables ***

\${URL} https://www.saucedemo.com/

*** Test Cases ***

Verify Login Element Is Present

Open Browser \${URL} Chrome

Maximize Browser Window

Page Should Contain Element id=user-name

Log Username field is present on the login page

Close Browser

Implementation Steps

1. Import SeleniumLibrary.
2. Store the SauceDemo URL in the \${URL} variable.
3. Open the webpage using Chrome.
4. Maximize the browser window.
5. Verify the username field using:
6. Write a confirmation message using the Log keyword.
7. Close the browser.

6. Output with Clearly Labelled Screenshots

Caption:

Figure 1: Successful execution of the Robot Framework element verification test

7. Result

The test case successfully verified the presence of the username field on the SauceDemo login page using the Page Should Contain Element keyword.

8. Observation

The Page Should Contain Element keyword successfully located the specified username element using its ID locator. The test completed successfully without errors.

9. Conclusion

The experiment demonstrated how **Robot Framework with SeleniumLibrary** can be used to verify the presence of web elements on a webpage. The test successfully automated the element verification process.
